EZ-Time Description

The EZ-Time Clock System is designed for new and existing buildings where a central time keeping system is advantageous. The EZ-Time Clock System is state-of-the-art technology with a Windows-based user interface for simple customer programming and updating. The EZ-Time Clock System can provide 255 independent clock drive circuits or 255 bell auxiliary circuits. This software has the power and flexibility to control one clock system or an entire school district using a network.
